The Cisco Webex difference

1 True end-to-end encryption

2 Simple, secure cross-company collaboration

3 Compliance, visibility and control

- Data encrypted in transit, in rest, and in use
- Your data remains encrypted with a key that you own
- All media encrypted including audio, messages, files whiteboards and video

- No need to provision guest users and set up separate spaces
- Anti-malware that protects from URLs and documents introduced from external users
- DLP policies that follow users collaborating outside their org

- ISO 27001, ISO 27018 for privacy data handling, SOC2, SOC3, HIPAA and FedRAMP certification
- Domain whitelisting and ability to block communications with outside users
- Built-in legal hold and extensive eDiscovery capabilities
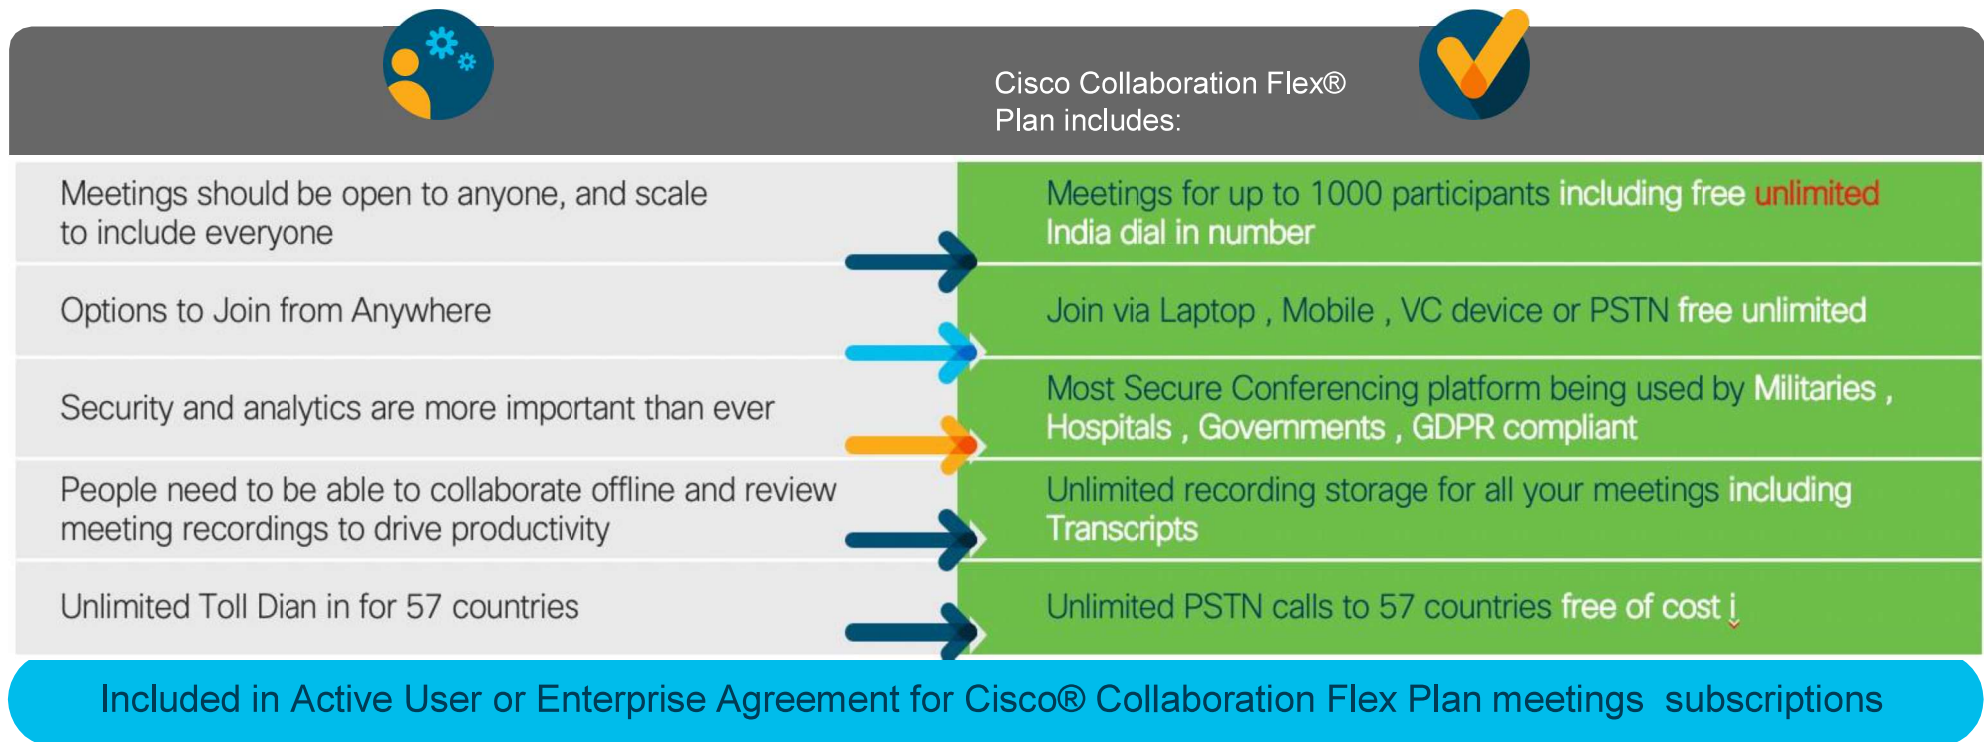

360-Degree approach to security and compliance

- Protect against malware
- Encryption of Data at Rest
- General Data Protection Regulation
- eDiscovery and Legal Hold
- Powerful Host Controls
- Secure Search
- Secure user identity and access
- Privacy Shield Framework
- Encrypted Media Streams
- Fed Ramp
- Global DDoS with Active Scrubbing
